But hey, we got a day and a half of this one! And I got to sleep in for two whole mornings. Too bad

Ummmm

It's a bug-bot.

I'm not sure I'm completely comfortable with this development.

Inchworm. Totally different from centipede. Really.

When I was (much) younger, I was running and took a shortcut under a low tree. Dangling from the branches of this tree, nearly invisible and hanging from gossamer threads of silk, were many HUNDREDS of inchworms. into which I ran.

It made me a bit phobic.

As bug bots go this one is pretty cute. Some of the planned military ones have that whole creepy scuttling thing down, and as for the jumping spider....

For really, truly creepy, insect cyborgs:

Oh, yes, it's adorable, until it unleashes the stinger/cutter.

Those tail antennae are just plain bad news.

Very cute, and quite efficient on trees, but what I want to know is, can it go up stone walls?
